SUMMARY

Full-Stack web developer with a CIS background and is proficient at networking and software computing. Earned a certificate from the Georgia Tech Full-Stack Web Development bootcamp. Exceptional communicator with more than three years of customer service at various QuikTrip locations. I worked on a team of four to develop a Rick and Morty story game that heavily relies on api and AJAX calls to dynamically generate bad advice, from bad-advice api, on the back of character cards. I've also led a team of four that built a dynamic wishlist application using Handlebars, MySQL, Sequelize, and ESLint. With each project, my aim is to best engage my audience for an impactful and enjoyable user experience. I'm excited to showcase my skills as part of a fast-paced, quality-driven team.

PROJECTS

Rick and Morty Adventure | <https://github.com/Adellis95/Project-1> | <https://adellis95.github.io/Project-1/>

- We designed an application based on the Rick and Morty Television show. Once, the user clicks the start journey button on the website, the user is sent on a journey to various worlds, where they are offered different life advice by using two API calls.
- I contributed to this project by working on the front-end team and designing the layout of our application.
- Tools / languages used:
 1. JavaScript
 2. HTML
 3. CSS
 4. JQuery
 5. Rick and Morty API: <https://rickandmortyapi.com/documentation>
 6. Bad Advice Rest API: <https://badadvice.rest/>
 7. Rick and Morty Soundboard: <https://www.101soundboards.com/boards/21656-rick-and-morty-soundboard>

Cyber Santa | <https://github.com/Adellis95/Project-2> |
<https://project-2-cyber-santa.herokuapp.com/>

- This application is a four page responsive codebase created to provide an accessible and centralized location for users to create, update, delete and view their own Christmas lists or lists of other users. This site can be used to store their own customized Christmas list and populate it with their gift ideas. Cyber Santa is a full-stack application that lets it's users get a little festive while planning their shopping.
- My core responsibilities for Cyber Santa was the back-end development. My teammate and I were entrusted to handle the jQuery functionality of the buttons and the API routes to: create a post, read the post, update the post, and delete the post that the user selects.

Tools that were used:

- HTML (using Handlebars)
- JavaScript
- CSS
- jQuery
- MySQL
- Sequelize
- Materialize Framework
- ESLint
- Heroku
 - JAWS_DB Addon
- Node.Js
 - Express
 - Handlebars, Express-Handlebars
 - Data parsing middleware

On-Track-App | <https://github.com/Adellis95/Project3-Hulk> |
<https://on-track-app-team-hulk.herokuapp.com/>

- In a world where remote learning is becoming more popular, we feel that this is the perfect time to leverage technology to encourage positive behavior in class whether online or virtually. Statistics show that students this past year have been struggling with online learning and staying focused and motivated. On track is an application to enforce positive behavior in school and to help keep students motivated while working remotely. Remember “back in the day” when you earned stars for good behavior and placed them on a sticker chart or had to pull your “red card” if you got in trouble? Our modern-day approach for the classic star chart is a great way to encourage positivity among students in a virtual + in-person setting. A user is able to access our website as either a teacher or a student. On track is a perfect way to keep communication going between a teacher and student throughout the year.
- Together with a team of four, we individually contributed frontend and backend development. Added conditional rendering of student cards by the logged in teacher.

EDUCATION

High School Diploma: 2014 Parkview High School Graduate

Bootcamp Certificate: Georgia Tech, Atlanta, GA

Georgia Tech Coding Boot Camp is a part-time, 24-week Full Stack Flex course that gives you the knowledge and skills to build dynamic end-to-end web applications and become a full stack web developer.
